Summary

UX Designer and Front-End Web Developer skilled at translating complex ideas into user-friendly experiences, from responsive marketing websites to enterprise SaaS products. Enjoys solving user problems by combining user research, iterative design, front-end web development, and cross-functional collaboration.

Skills & Tools

UX and product design: UX design, product design, interaction design, responsive design, wireframing, user flows, user stories, prototyping, usability testing, user research, affinity diagramming
Front-end web development: React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS
Tools: Figma, Git/GitHub, Azure DevOps, Asana, Microsoft Teams, Webflow

Experience

Product Designer (Contract) March 2026 - August 2026
Storee, Springfield, MO (Remote)

- Designed foundational workflows and reusable product interactions for a scalable, multi-tenant SaaS project management platform, defining core user experiences.
- Streamlined complex project management features involving large data sets by designing editable data tables, saved views, Kanban and Gantt visualizations, filtering, grouping, searching, editing, bulk actions, notifications, and customizable table settings.
- Mapped end-to-end project creation, edit, delete, and archive workflows, designing dynamic conditional forms, multi-select inputs, validation, confirmation, and success states to simplify project management.
- Created low-fidelity resource management and allocation designs, incorporating annotations for different UI components and interactions to begin the ideation process and encourage collaboration with stakeholders.
- Delivered developer-ready mockups with detailed UI annotations to ensure accurate front-end implementation.
- Drove cross-functional alignment by presenting design concepts during stakeholder reviews, iterating on leadership feedback, and managing tasks within Azure DevOps.

WeatherTrends 360, Bethlehem, PA (Remote)

- Designed end-to-end onboarding, historical weather access, and account gating workflows, including account setup, personalized interests selection, calendar-based navigation, and subscription paywall experiences.
- Created cohesive responsive user experiences for a weather dashboard and interactive radar across desktop, tablet, mobile, and wearable platforms.
- Simplified complex interactive map tools and navigation by incorporating data overlays, timeline and map controls, legends, access to historical weather data, and responsive navigation drawers.
- Maintained design system efficiency by building reusable Figma components and variants to ensure visual consistency and streamline design iterations.
- Translated Figma mockups into code by styling a landing page built in Webflow, ensuring responsive behavior, and writing custom JavaScript to implement an automated slideshow component.

UX Designer and Web Developer (Freelance) August 2025 - October 2025
Proof-of-Concept Business Website, Berkeley, CA

- Led user research by conducting interviews to identify user pain points and improvement opportunities that will inform design solutions.
- Conducted a competitive audit to identify strengths and weaknesses of similar websites, and to spark ideas for designs.

- Created wireframes and high-fidelity mockups in Figma to showcase layouts and final designs before proceeding to development.
- Built and delivered a fully functional prototype to showcase layout, branding, and functionality using HTML, CSS, JavaScript, Bootstrap, and EmailJS.

UX Designer (Freelance) October 2024
Kumiko Music, Oakland, CA

- Improved website usability and brand identity by redesigning navigation, layout, and visual hierarchy using accessibility best practices for contrast, spacing, and readability.
- Led user research and usability studies to identify key pain points and improvement opportunities, resulting in a more intuitive user experience.
- Presented research findings and design decisions to the client throughout the project, fostering a collaborative process and ensuring alignment with both stakeholder and user goals.
- Designed wireframes, high-fidelity mockups, and an interactive prototype in Figma based on iterative user feedback.
- Translated final designs into a responsive website template using Wix, improving the site's visual appeal and usability across devices.

Web Developer August 2021 – February 2024
Sift, San Francisco, CA

- Built, improved, and maintained responsive web pages across Sift's marketing site, by participating in design discussions, ensuring consistent performance across devices and browsers, and implementing SEO best practices to improve search visibility.
- Contributed to a trunk-based development workflow with other developers, participating in code reviews to ensure best practices, validating code changes against requirements, and integrating and deploying changes frequently.
- Led development of key marketing pages—including the Fraud Intelligence Center and Fraud Industry Benchmarking Resource—by collaborating cross-functionally with designers and marketing stakeholders.
- Independently developed and launched a public-facing brand guidelines page, improving access to brand assets and increasing cross-team consistency in visual and written communications.
- Translated designs into fully functional web pages by collaborating closely with graphic designers and content marketers, contributing to the successful launch of high-visibility marketing initiatives.
- Refactored and updated existing site pages to align with new brand guidelines following a company-wide refresh, resulting in a more cohesive user experience and improved readability on content-heavy pages.
- Authored detailed developer documentation for Sift's Marketing and WordPress sites, accelerating onboarding for new developers.
- Debugged and resolved front-end issues to ensure a seamless user experience.
- Supported the Marketing Operations team by developing a custom Marketo landing page template to streamline the creation of marketing campaigns.

Education

Ultimate Figma Masterclass Certificate: Designership, online.

Google UX Design Professional Certificate: Coursera, online.

Certificate in Full Stack Web Development: University of California, Berkeley Extension, Berkeley, CA.

Master of Science, Forensic Science: University of Central Oklahoma, Edmond, OK.

Bachelor of Science, Biology: James Madison University, Harrisonburg, VA.
